could quite feasibly fit the entire world stock of giant pterosaur remains onto your kitchen table (fig. 24.3). Accordingly, size estimates of these animals were very poorly constrained when knowledge of azhdarchid anatomy was in its infancy, leading to wingspan estimates of between 11 and 21 m (Lawson 1975a). As understanding of the azhdarchid bauplan has increased, these wingspan estimates were revised to 10.5 m for Quetzalcoatlus (Langston 1981); 12 m for Hatzegopteryx (Buffetaut et al. 2003); and 11–13 m for Arambourgi-
