In this crystal-clear little book, Geoffrey Vallis masterfully explains the basics of physical oceanography and the role of the oceans in the climate system. He writes for those conversant with some university-level mathematics and physics, but whose knowledge of the oceans and climate is limited. The book moves smoothly from fundamental principles to topics of current research interest, including natural climate variability, such as El Niño, and the daunting challenge of man-made climate change, or global warming.

—Richard Somerville, Scripps Institution of Oceanography

Climate and the Oceans is the first place to turn to get the essential facts about this crucial aspect of the Earth's climate system. Ideal for students and nonspecialists alike, this primer offers the most concise and up-to-date overview of the subject available.

Geoffrey K. Vallis is professor and senior scientist in the Atmospheric and Oceanic Sciences Program and the Geophysical Fluid Dynamics Laboratory, Princeton University.
**NEW**

**The Cryosphere**

Shawn J. Marshall

“Distinguished glaciologist Shawn Marshall leads a lucid tour through the essentials of ice in the environment, with more than enough information to satisfy the casual student, and additional pointers to steer the serious scientist.”

—Richard Alley, Pennsylvania State University

In this primer, glaciologist Shawn Marshall introduces readers to the cryosphere and the broader role it plays in our global climate system.

Shawn J. Marshall is the Canada Research Chair in Climate Change at the University of Calgary.

2011. 304 pages. 34 line illus. 8 tables.

Pa: 978-0-691-14526-6  $24.95 | £16.95
Cl: 978-0-691-14525-9  $80.00 | £55.00

**FORTHCOMING**

**Atmosphere, Clouds, and Climate**

David Randall

“In this book, one of the leaders of the field condenses a huge amount of climate theory into a very small space. This is done in an informal narrative style with a minimum of equations and other hard technical details, but with a serious dedication to constructing a coherent and logical storyline without glossing over essentials. I have not seen another book like this.”

—Adam Sobel, Columbia University

The atmosphere is critical to climate change. It can amplify shifts in the climate system, and also mitigate them. This primer offers a short, reader-friendly introduction to these atmospheric processes and how they work, written by a leading expert on the subject.

David Randall is professor of atmospheric science at Colorado State University.

May 2012. 288 pages. 19 halftones. 21 line illus. 5 tables.

Pa: 978-0-691-14375-0  $27.95 | £19.95
Cl: 978-0-691-14374-3  $75.00 | £52.00

**The Global Carbon Cycle**

David Archer

“David Archer is one of the world’s leading experts advancing our understanding of the consequences of carbon dioxide emissions in the context of geologic time. Archer’s book explains how the consequences of our fossil-fuel economy will outlast even our nuclear waste. This book is essential reading—it wakes us up to the long-term consequences of our fossil-fuel folly.”

—Ken Caldeira, Carnegie Institution for Science

2010. 216 pages. 25 line illus.

Pa: 978-0-691-14414-6  $24.95 | £16.95
Cl: 978-0-691-14413-9  $70.00 | £48.95

FORTHCOMING
Revised and Expanded Edition
How to Build a Habitable Planet
The Story of Earth from the Big Bang to Humankind
Charles H. Langmuir & Wally Broecker

“This is a magnificent book, a successful and very worthwhile revision of its legendary and coveted first edition. The new edition offers more than a minor dusting off of the material. There are some completely new chapters and the authors have also done a good job of introducing newer discoveries. This book is more timely than ever, and I greet this revision with uncontained enthusiasm.”
—Raymond T. Pierrehumbert, University of Chicago

Since its first publication more than twenty-five years ago, How to Build a Habitable Planet has established a legendary reputation as an accessible yet scientifically impeccable introduction to the origin and evolution of the Earth, from the Big Bang through the rise of human civilization. This classic account of how our habitable planet was assembled from the stuff of stars introduced readers to planetary, earth, and climate science by way of a fascinating narrative. Now this great book has been made even better. Harvard geochemist Charles Langmuir has worked closely with the original author, Wally Broecker, one of the world’s leading Earth scientists, to revise and expand the book for a new generation of readers for whom active planetary stewardship is becoming imperative.

Charles H. Langmuir is the Higgins Professor of Geochemistry at Harvard University. Wally Broecker is the Newberry Professor of Earth and Environmental Sciences at Columbia University.

May 2012. 720 pages. 16 color plates. 62 halftones. 220 line illus. 18 tables.
Cl: 978-0-691-14006-3 $39.95 | £27.95

NEW
Strange New Worlds
The Search for Alien Planets and Life beyond Our Solar System
Ray Jayawardhana
“Professor Jayawardhana is an award-winning science writer and an eminent planet-hunter, and so is the perfect person to write an accessible guidebook to the new worlds we’re discovering in our galaxy. He explains how many of those discovered so far are pretty exotic, bloated and massive or scorchingly close to their sun, and how we’ve even had our first weather report for another world. But what’s most exciting is that this book explains how we now have within our grasp the ability to spot a true twin of Earth.”
—BBC Focus
Ray Jayawardhana is professor and Canada Research Chair in Observational Astrophysics at the University of Toronto.

NEW
Reinventing Discovery
The New Era of Networked Science
Michael Nielsen
“Science has always been a contact sport; the interaction of many minds is the engine of the discipline. Michael Nielsen has given us an unparalleled account of how new tools for collaboration are transforming scientific practice. Reinventing Discovery doesn’t just help us understand how the sciences are changing, it shows us how we can participate in the change.”
—Clay Shirky, author of Here Comes Everybody and Cognitive Surplus
Michael Nielsen is one of the pioneers of quantum computing. He is an essayist, speaker, and advocate of open science.

The Medea Hypothesis
Is Life on Earth Ultimately Self-Destructive?
Peter Ward
“The point of The Medea Hypothesis is that life, rather than helping to regulate the Earth ‘System’ by negative feedbacks, does all it can to consume the resources available—sowing the seeds of its own extinction.”
—Dr. Henry Gee, BBC Focus

James Lovelock
In Search of Gaia
John Gribbin & Mary Gribbin
“John and Mary Gribbin lead us on an exploration of how Lovelock came to his perspective of Earth…. They offer valuable insights not only into how Lovelock came up with the idea for Gaia but more generally how his mind works and where the ideas for his scores of inventions come from.”
—Lee R. Kump, Science

Mathematical Modeling of Earth’s Dynamical Systems
A Primer
Rudy Slingerland & Lee Kump

“[A] must-read for all geoscientists, and not just students. This excellent primer offers bite-size gems of insight into the world of quantitative geosciences applications, covers both mathematical and modeling concepts, and offers practical exercises to build expertise.”
—James P. M. Syvitski, Community Surface Dynamics Modeling System

Rudy Slingerland and Lee Kump are professors of geosciences at Pennsylvania State University.

NEW

Spatiotemporal Data Analysis
Gidon Eshel

“Spatiotemporal Data Analysis is accessible and applicable without sacrificing rigor. The key is a steady stream of well-chosen examples and, most unusual in any textbook, a distinctive narrative voice that guides readers through the material, explaining the details while making sure the big picture is always in view. It will become an essential text for earth scientists and many others who analyze spatiotemporal data.”
—Mark Cane, Columbia University

Gidon Eshel is Bard Center Fellow at Bard College.

NEW

Chemical Biomarkers in Aquatic Ecosystems
Thomas S. Bianchi & Elizabeth A. Canuel

“This is a must-have volume for all hands-on researchers, in aquatic biogeochemistry, organic geochemistry, and molecular ecology, from beginning undergraduates to experienced senior researchers.”
—Stuart G. Wakeham, Skidaway Institute of Oceanography

Thomas S. Bianchi is professor of oceanography at Texas A&M University. Elizabeth A. Canuel is professor of marine science at the Virginia Institute of Marine Science, College of William & Mary.
FOR COURSE USE: Professors who wish to consider a book from this catalog for course use may request an examination copy. For more information please visit: press.princeton.edu/class.html
Science Essentials is a new series that brings cutting-edge science to general readers, explaining the critical advances that are changing our world. In each volume, a prominent scientist—chosen by an advisory board of the National Academy of Sciences—conveys in a clear language the fundamental knowledge underlying an important and rapidly changing scientific field.

The Future of Fossil Fuels
from Hubbert’s Peak
Kenneth S. Deffeyes

As debates about the effects of fossil fuels on our climate and foreign policy intensify, the question of just how much longer we can depend on this finite source of energy becomes more and more pressing. This selection from Hubbert’s Peak, the leading book on the limits of our oil supply, forecasts what the future will bring for fossil fuels and what the alternatives are likely to be.

$1.99 | £1.50

The Five Habits of Highly Effective Honeybees
(and What We Can Learn from Them)
from Honeybee Democracy
Thomas D. Seeley

Studies of animal behavior have often been invoked to help explain and even guide human behavior. Think of Pavlov and his dogs or Goodall and her chimps. But, as these examples indicate, the tendency has been to focus on “higher,” more cognitively developed, and thus, it is thought, more intelligent creatures than mindless, robotic insects. Not so! Learn here how honeybees work together to form a collective intelligence and even how they make decisions democratically. The wizzzzdom of crowds indeed! Here are five habits of effective groups that we can learn from these clever honeybees.
