Princeton Primers in Climate is a new series of short, authoritative books that explain the state of the art in climate-science research. Written specifically for students, researchers, and scientifically minded general readers looking for succinct and readable books on this frequently misunderstood subject, these primers reveal the physical workings of the global climate system with unmatched accessibility and detail. Princeton Primers in Climate is the ideal first place to turn to get the essential facts, presented with uncompromising clarity, and to begin further investigation—whether in the classroom or in one's own reading chair.

FORTHCOMING

Paleoclimate
Michael L. Bender

"Paleoclimatology has been missing a concise, modern, overview textbook, and I think this book will fill that niche. There is much ground to cover and the text does a good job of bringing the reader up to speed on most of the important patterns and processes in Earth's climatic history. The book combines excellent coverage of basic physical and chemical aspects of the climate system with a long-term historical overview of the climate system in action."
—Matthew Huber, Purdue University

The most up-to-date overview on the subject, Paleoclimate provides an ideal introduction.

Michael L. Bender is professor of geosciences and atmospheric/ocean sciences at Princeton University.

Forthcoming

Climate and Ecosystems
David Schimel

"This compelling book provides an excellent summary of the interactions between ecosystems and climate."
—Richard Houghton, Woods Hole Research Center

How does life on our planet respond to—and shape—climate? This question has never been more urgent than it is today, when humans are faced with the daunting task of guiding adaptation to an inexorably changing climate. This concise, accessible, and authoritative book provides an unmatched introduction to the most reliable current knowledge about the complex relationship between living things and climate.

David Schimel is a senior research scientist at the Jet Propulsion Lab in Pasadena, California.
NEW

Atmosphere, Clouds, and Climate
David Randall

“This lucid book gives a tour of the most important atmospheric processes determining climate.”
—Tapio Schneider, California Institute of Technology

The atmosphere is critical to climate change. It can amplify shifts in the climate system, and also mitigate them. This primer offers a short, reader-friendly introduction to these atmospheric processes and how they work, written by a leading expert on the subject.

David Randall is professor of atmospheric science at Colorado State University.

2012. 288 pages. 19 halftones. 21 line illus. 5 tables.
Pa: 978-0-691-14375-0 $27.95 | £19.95
Cl: 978-0-691-14413-9 $75.00 | £52.00

Climate and the Oceans
Geoffrey K. Vallis

“In this crystal-clear little book, Geoffrey Vallis masterfully explains the basics of physical oceanography and the role of the oceans in the climate system.”
—Richard Somerville, Scripps Institution of Oceanography

2011. 248 pages. 32 line illus. 2 tables.
Pa: 978-0-691-15028-4 $24.95 | £16.95
Cl: 978-0-691-14467-2 $80.00 | £55.00

The Cryosphere
Shawn J. Marshall

“This is one of the best, most up-to-date books about the state of the cryosphere and an excellent read.”
—Eric Rignot, University of California, Irvine

2011. 304 pages. 34 line illus. 8 tables.
Pa: 978-0-691-14526-6 $24.95 | £16.95
Cl: 978-0-691-14525-9 $80.00 | £55.00

The Global Carbon Cycle
David Archer

“Fossil-fuel carbon is our dangerous treasure. David Archer brilliantly and lucidly provides the essential background on Earth’s carbon cycle that we need to make wise decisions about future use.”
—Richard B. Alley, Pennsylvania State University

2010. 216 pages. 25 line illus.
Pa: 978-0-691-14414-6 $29.95 | £19.95
Cl: 978-0-691-14413-9 $72.50 | £50.00

FORTHCOMING IN THE SERIES

Natural Climate Change
Mark Cane

The Sun’s Influence on Climate
Joanna D. Haigh

NEW
Revised and Expanded Edition
How to Build a Habitable Planet
The Story of Earth from the Big Bang to Humankind
Charles H. Langmuir & Wally Broecker

“As NASA continues to assess the habitability of our planetary neighbor, Mars, this insightful and approachable book is a timely reminder of how important it is to understand the habitability of our own Earth. Comprehensive and up-to-date, it exposes how ideas, imperfect understanding, and controversies drive scientific knowledge forward.”
—Roger Everett Summons, Massachusetts Institute of Technology

Charles H. Langmuir is the Higgins Professor of Geochemistry at Harvard University. Wally Broecker is the Newberry Professor of Earth and Environmental Sciences at Columbia University.

2012. 752 pages. 16 color plates. 62 halftones. 220 line illus. 18 tables. CJK 978-0-691-14006-3 $39.95 | £27.95

The Great Ocean Conveyor
Discovering the Trigger for Abrupt Climate Change
Wally Broecker

“Wally Broecker is one of the great pioneers of paleoclimatology. . . . Relating his breakthroughs and setbacks, he portrays science as a continuous struggle to understand more fully and more accurately how the world really works.”
—Nature

2010. 176 pages. 10 halftones. 40 line illus. 12 maps. CJK 978-0-691-14354-5 $28.95 | £19.95

FORTHCOMING
Near-Earth Objects
Finding Them Before They Find Us
Donald K. Yeomans

“This is a wonderful and timely book, not to mention a great read! Asteroids are indeed wondrous objects, and it is simply a matter of time before we find one with our address on it. Yeomans’ unparalleled expertise, storytelling skills, and wry sense of humor are a savory delight. Enjoy!”
—Rusty Schweickart, Apollo 9 astronaut

Donald K. Yeomans is a fellow and senior research scientist at the Jet Propulsion Laboratory, where he is manager of NASA’s Near-Earth Object Program Office and supervisor of the Solar System Dynamics Group.

December 2012. 192 pages. 20 halftones. 19 line illus. 6 tables. CJK 978-0-691-14929-5 $24.95 | £16.95

FORTHCOMING PAPERBACK
Finalist, 2011 Lane Anderson Award, Fitzhenry Family Foundation
One of Choice’s Outstanding Academic Titles for 2011
One of Library Journal’s Best Sci-Tech Books for 2011

With a new afterword by the author
Strange New Worlds
The Search for Alien Planets and Life beyond Our Solar System
Ray Jayawardhana

“I felt the thrill of briefly sharing in the efforts of these planet-seeking scientists and seeing the universe through their eyes.”
—Mike Brown, Wall Street Journal

Ray Jayawardhana is professor and Canada Research Chair in Observational Astrophysics at the University of Toronto.

May 2013. 280 pages. 3 halftones. 25 line illus. 4 tables. CJK 978-0-691-15807-5 $17.95 | £12.50

FORTHCOMING

**The White Planet**
The Evolution and Future of Our Frozen World  
Jean Jouzel, Claude Lorius & Dominique Raynaud  
Translated from the French by Teresa Lavender Fagan

"The White Planet is a fascinating account of ice and climate change—and why we should be concerned for the future of life on Earth. The authors are world leaders in the study of the cryosphere, and the science in this book is very strong and thorough."
—Jo Jacka, chief editor of the Journal of Glaciology

Jean Jouzel, Claude Lorius, and Dominique Raynaud are internationally acclaimed scientists who have won many awards for their work documenting long-term climate change through the study of deep ice cores.

January 2013. 336 pages. 1 halftone. 33 line illus. 3 tables. 2 maps.

NEW
Second Edition
Global Environment
Water, Air, and Geochemical Cycles
Elizabeth Kay Berner & Robert A. Berner

This newly revised edition of Global Environment discusses the major elements of the geochemical cycles and global fluxes found in the atmosphere, land, lakes, rivers, biota, and oceans, as well as the human effects on these fluxes. Retaining the strengths of the original edition while incorporating the latest discoveries, this textbook takes an integrated, multidisciplinary, and global approach to geochemistry and environmental problems and introduces fundamental concepts of meteorology, surficial geology (weathering, erosion, and sedimentation), biogeochemistry, limnology, and oceanography.

Elizabeth Kay Berner is a lecturer in geology at the University of Connecticut and research affiliate in the Department of Geology and Geophysics at Yale University. Robert A. Berner is the Alan M. Bateman Professor of Geology and Geophysics Emeritus at Yale University.

2012. 464 pages. 31 halftones. 116 line illus. 83 tables.
Cl: 978-0-691-13678-3 $85.00 | £59.00

FORTHCOMING
Climate Dynamics
Kerry H. Cook

“Climate change and its impacts are being embraced by a wider community than just earth scientists. A useful textbook, Climate Dynamics covers the basic science required to gain insights into what constitutes the climate system and how it behaves. While still being quantitative, the material is written in a lecture-note style that creates a simplified, but not simple, approach to teaching this complex subject.”
—Chris E. Forest, Pennsylvania State University

Climate Dynamics is an advanced undergraduate-level textbook that provides an essential foundation in the physical understanding of the earth’s climate system.

Kerry H. Cook is a professor in the Department of Geological Sciences at the Jackson School of Geosciences at the University of Texas, Austin.

April 2013. 248 pages. 81 halftones. 38 line illus. 7 tables. 
Cl: 978-0-691-12530-5 $65.00 | £44.95

FORTHCOMING
Ecology of Climate Change
The Importance of Biotic Interactions
Eric Post

“I believe that this book will become the go-to reference for gaining a foundational understanding of how global climate change has and will continue to transform ecological systems in the face of anthropogenic impacts. An encyclopedic synthesis of the field, it provides exemplary coverage of the vast literature.”
—Oswald J. Schmitz, Yale University

In a remarkably comprehensive synthesis, this book presents past, ongoing, and future ecological responses to climate change in the context of two simplifying hypotheses, facilitation and interference, arguing that biotic interactions may be the primary driver of ecological responses to climate change across all levels of biological organization.

Eric Post is professor of biology and ecology at Pennsylvania State University.

Monographs in Population Biology, 52
July 2013. 392 pages. 124 line illus.
Cl: 978-0-691-14847-2 $59.50 | £41.95

Read newsworthy and lively commentary on our new blog at press.princeton.edu/blog
Mathematical Modeling of Earth’s Dynamical Systems
A Primer
Rudy Slingerland & Lee Kump

“[A] must-read for all geo-scientists, and not just students. This excellent primer offers bite-size gems of insight into the world of quantitative geosciences applications, covers both mathematical and modeling concepts, and offers practical exercises to build expertise. Course notes and methodologies will be improving across our academies.”
—James P. M. Syvitski, Community Surface Dynamics Modeling System

2011. 248 pages. 3 halftones. 72 line illus. 9 tables. 1 map.
Pp: 978-0-691-14514-3 $55.00 | £37.95

Spatiotemporal Data Analysis
Gidon Eshel

“Spatiotemporal Data Analysis is accessible and applicable without sacrificing rigor. The key is a steady stream of well-chosen examples and, most unusual in any textbook, a distinctive narrative voice that guides readers through the material, explaining the details while making sure the big picture is always in view. It will become an essential text for earth scientists and many others who analyze spatiotemporal data.”
—Mark Cane, Columbia University

2012. 336 pages. 76 halftones. 19 line illus.
Cl: 978-0-691-12891-7 $85.00 | £59.00

Chemical Biomarkers in Aquatic Ecosystems
Thomas S. Bianchi & Elizabeth A. Canuel

“Bianchi and Canuel have done an extraordinary job of capturing the essence of biomarker geochemistry in their timely and important book. They give an in-depth overview of this discipline from its roots more than a half-century ago to the present day. In doing so, they explain the fundamentals of molecular and isotopic organic geochemistry, and they describe interesting applications of these tracers for improving understanding of organic matter origins and cycles in marine, estuarine, and freshwater settings.”
—Mark Cane, Columbia University

2011. 416 pages. 78 halftones. 117 line illus. 26 tables.
Cl: 978-0-691-13414-7 $99.95 | £69.00

Earthquake and Volcano Deformation
Paul Segall

“This excellent and timely book presents and develops models for earth deformations.”
—John W. Rudnicki, Northwestern University

2010. 464 pages. 13 color illus. 1 halftone. 269 line illus.
Cl: 978-0-691-13302-7 $95.00 | £65.00

Ocean Biogeochemical Dynamics
Jorge L. Sarmiento & Nicolas Gruber

“This textbook is a monumental and masterful achievement.”
—David M. Karl, Bulletin of the American Society for Limnology and Oceanography

2006. 528 pages. 8 color plates. 102 halftones. 178 line illus. 62 tables.
Cl: 978-0-691-01707-5 $90.00 | £62.00

**The Princeton Guide to Ecology**
Edited by Simon A. Levin

“Every ecology graduate student studying for their comprehensive examination needs this book. For that matter, every practicing ecologist interested in keeping up with aspects of the field, particularly outside of their own subdiscipline, would be well served to have this book on hand.”
—Jonathan M. Chase, *Quarterly Review of Biology*

Simon A. Levin is the George M. Moffett Professor of Biology and a professor of ecology and environmental biology at Princeton University, where he directs the Center for BioComplexity.

2012. 848 pages. 25 color illus. 14 halftones. 185 line illus. 22 tables.
Pa: 978-0-691-15604-0 $49.95 | £34.95
Cl: 978-0-691-12839-9 $125.00 | £85.00

**NEW PAPERBACK**

**Guesstimation 2.0**
Solving Today’s Problems on the Back of a Napkin
Lawrence Weinstein

“This is an absolutely great book, a worthy sequel to *Guesstimation*. The breadth of scope of the problems is truly impressive. Weinstein’s arguments are always convincing and, in many cases, very clever. His sense of humor provides a pain-free tutorial on how analysts can make real progress in understanding vaguely defined problems.”
—Paul J. Nahin, author of *Number-Crunching: Taming Unruly Computational Problems from Mathematical Physics to Science Fiction*

Lawrence Weinstein is University Professor of Physics at Old Dominion University.

2012. 384 pages. 95 halftones.
Pa: 978-0-691-15080-2 $19.95 | £13.95

**NEW PAPERBACK**

**How Old Is the Universe?**
David A. Weintraub

“This is no-nonsense science writing that will be enjoyed for years: David Weintraub is an expert guide, laying out the evidence with just the right amount of detail.”
—Michael Brooks, *New Scientist*

David A. Weintraub is professor of astronomy at Vanderbilt University.

2012. 384 pages. 46 halftones. 76 line illus.
Pa: 978-0-691-15628-6 $22.95 | £15.95
Cl: 978-0-691-14731-4 $29.95 | £19.95
Studies of animal behavior have often been invoked to help explain and even guide human behavior. Think of Pavlov and his dogs or Goodall and her chimps. But, as these examples indicate, the tendency has been to focus on “higher,” more cognitively developed, and thus, it is thought, more intelligent creatures than mindless, robotic insects. Not so! Learn here how honeybees work together to form a collective intelligence and even how they make decisions democratically. The wizzzzdom of crowds indeed! Here are five habits of effective groups that we can learn from these clever honeybees.

The Future of Fossil Fuels
from Hubbert’s Peak
Kenneth S. Deffeyes

As debates about the effects of fossil fuels on our climate and foreign policy intensify, the question of just how much longer we can depend on this finite source of energy becomes more and more pressing. This selection from Hubbert’s Peak, the leading book on the limits of our oil supply, forecasts what the future will bring for fossil fuels and what the alternatives are likely to be.

The Five Habits of Highly Effective Honeybees (and What We Can Learn from Them)
from Honeybee Democracy
Thomas D. Seeley

Studies of animal behavior have often been invoked to help explain and even guide human behavior. Think of Pavlov and his dogs or Goodall and her chimps. But, as these examples indicate, the tendency has been to focus on “higher,” more cognitively developed, and thus, it is thought, more intelligent creatures than mindless, robotic insects. Not so! Learn here how honeybees work together to form a collective intelligence and even how they make decisions democratically. The wizzzzdom of crowds indeed! Here are five habits of effective groups that we can learn from these clever honeybees.

Honeybee Democracy
Thomas D. Seeley

“The year’s most enchanting science book.”
—Financial Times

2010. 280 pages. 30 color illus. 30 half tones. 26 line illus. 1 table. Cl: 978-0-691-14721-5 $29.95 | £19.95

Ancient Wine
The Search for the Origins of Viniculture
Patrick E. McGovern

“A remarkable new book.”
—Adam Gopnik, New Yorker

2007. 400 pages. 16 color illus. 9 line illus. 35 half tones. 7 maps. Pa: 978-0-691-12784-2 $27.95 | £19.95

Princeton Shorts are brief selections taken from influential Princeton University Press books and produced exclusively in eBook format. Providing unmatched insight into important contemporary issues or timeless passages from classic works of the past, Princeton Shorts enable you to be an instant expert in a world where information is everywhere but quality is at a premium.
