Why Democracy Needs the Humanities

**Martha C. Nussbaum**

In this short and powerful book, celebrated philosopher Martha Nussbaum makes a passionate case for the importance of the liberal arts at all levels of education.

Historically, the humanities have been central to education because they have rightly been seen as essential for creating competent democratic citizens. But recently, Nussbaum argues, thinking about the aims of education has gone disturbingly awry both in the United States and abroad. Anxiously focused on national economic growth, we increasingly treat education as though its primary goal were to teach students to be economically productive rather than to think critically and become knowledgeable and empathetic citizens.

Martha C. Nussbaum is the Ernst Freund Distinguished Service Professor of Law and Ethics in the Philosophy Department, Law School, and Divinity School at the University of Chicago.

*This book could not be more timely nor more on target. Martha Nussbaum argues that education has become increasingly utilitarian, market-driven, career-oriented, and impoverished in its attention to the arts and humanities. The arts and humanities don’t necessarily make people humane and creative, but they are, Nussbaum argues, required for Socratic examination and self-examination. If we agree with Socrates that the unexamined life is not worth living, then we need Nussbaum’s argument.*

Surviving Death
Mark Johnston

In this extraordinary book, Mark Johnston sets out a new understanding of personal identity and the self, thereby providing a purely naturalistic account of surviving death.

Death threatens our sense of the importance of goodness. The threat can be met if there is, as Socrates said, “something in death that is better for the good than for the bad.” Yet, as Johnston shows, all existing theological conceptions of the afterlife are either incoherent or at odds with the workings of nature. These supernaturalist pictures of the rewards for goodness also obscure a striking consilience between the philosophical study of the self and an account of goodness common to Judaism, Christianity, Hinduism, and Buddhism: the good person is one who has undergone a kind of death of the self and who lives a life transformed by entering imaginatively into the lives of others, anticipating their needs and true interests. As a caretaker of humanity who finds his or her own death comparatively unimportant, the good person can see through death.

Saving God
Religion after Idolatry
Mark Johnston

In this book, Mark Johnston argues that God needs to be saved not only from the distortions of the “undergraduate atheists” (Richard Dawkins, Christopher Hitchens, and Sam Harris) but, more importantly, from the idolatrous tendencies of religion itself. Each monotheistic religion has its characteristic ways of domesticating True Divinity, of taming God’s demands so that they do not radically threaten our self-love and false righteousness. Turning the monotheistic critique of idolatry on the monotheisms themselves, Johnston shows that much in these traditions must be condemned as false and spiritually debilitating. He then presents a conception of God that both resists idolatry and respects the natural sciences.

Mark Johnston is the Walter Cerf Professor of Philosophy at Princeton University.

Philosophical Logic
John P. Burgess

Philosophical Logic is a clear and concise critical survey of nonclassical logics of philosophical interest written by one of the world’s leading authorities on the subject. After giving an overview of classical logic, John Burgess introduces five central branches of nonclassical logic (temporal, modal, conditional, relevantistic, and intuitionistic), focusing on the sometimes problematic relationship between formal apparatus and intuitive motivation. Requiring minimal background and arranged to make the more technical material optional, the book offers a choice between an overview and in-depth study, and it balances the philosophical and technical aspects of the subject.

The book emphasizes the relationship between models and the traditional goal of logic, the evaluation of arguments, and critically examines apparatus and assumptions that often are taken for granted. Philosophical Logic provides an unusually thorough treatment of conditional logic, unifying probabilistic and model-theoretic approaches. It underscores the variety of approaches that have been taken to relevantistic and related logics, and it stresses the problem of connecting formal systems to the motivating ideas behind intuitionistic mathematics. Each chapter ends with a brief guide to further reading.

Philosophical Logic addresses students new to logic, philosophers working in other areas, and specialists in logic, providing both a sophisticated introduction and a new synthesis.

John P. Burgess is professor of philosophy at Princeton University.

“"This book is terrific. It covers the basics of philosophical logic in a lively, interesting, and informative way.""  
—Stewart Shapiro, editor of The Oxford Handbook of Philosophy of Mathematics and Logic

“"Nicely done and very useful for someone who wants a compact and accessible introduction to nonclassical logic.""

On Compromise and Rotten Compromises
Avishai Margalit

“Avishai Margalit has turned a fierce spotlight on a neglected but important area of ethics, when compromises are morally acceptable. He introduces new and compelling distinctions and illuminates a number of major issues in contemporary and recent historical events.”
—Kenneth J. Arrow, Nobel Laureate in Economics

When is political compromise acceptable—and when is it fundamentally rotten, something we should never accept, come what may? What if a rotten compromise is politically necessary? Combining philosophy, politics, and history, and written in a vivid and accessible style, On Compromise and Rotten Compromises is full of surprising new insights about war, peace, justice, and sectarianism.

Avishai Margalit is the George F. Kennan Professor at the Institute for Advanced Study in Princeton and professor emeritus of philosophy at the Hebrew University of Jerusalem.

Wittgenstein famously remarked in 1923, “Darwin’s theory has no more relevance for philosophy than any other hypothesis in natural science.” Yet today we are witnessing a major revival of interest in applying evolutionary approaches to philosophical problems. Philosophy after Darwin is an anthology of essential writings covering the most influential ideas about the philosophical implications of Darwinism, from the publication of On the Origin of Species to today’s cutting-edge research.

Michael Ruse presents writings by leading modern thinkers and researchers—including some writings never before published—together with the most important historical documents on Darwinism and philosophy, starting with one by Darwin himself. Included here are readings by Herbert Spencer, Friedrich Nietzsche, Thomas Henry Huxley, G. E. Moore, John Dewey, Konrad Lorenz, Stephen Toulmin, Karl Popper, Edward O. Wilson, Hilary Putnam, Philip Kitcher, Elliott Sober, and Peter Singer. Readers will encounter some of the staunchest critics of the evolutionary approach, such as Alvin Plantinga, as well as revealing excerpts from works like Jack London’s The Call of the Wild. Ruse’s comprehensive general introduction and insightful section introductions put these writings in context and explain how they relate to such fields as epistemology, philosophy of mind, philosophy of language, and ethics.

An invaluable anthology and sourcebook, Philosophy after Darwin traces philosophy’s complicated relationship with Darwin’s dangerous idea, and shows how this relationship reflects a broad movement toward a secular, more naturalistic understanding of the human experience.

Michael Ruse is the Lucyle T. Werkmeister Professor of Philosophy at Florida State University.

In recent years, philosophers have had plenty to say about the relevance of evolutionary thinking to questions about knowledge, rationality, and ethics. This judiciously chosen and wide-ranging set of readings, prefaced by expert introductions from editor Michael Ruse, helps us to understand the current state of play in these debates, and also their historical roots. It is an excellent collection.”

**The Brain and the Meaning of Life**

**Paul Thagard**

“The Brain and the Meaning of Life provides a highly informed account of the relevance of recent neuroscience to human life. It compellingly tells how humans, as biological creatures in a physical world, can find meaning and value.”

—William Bechtel, University of California, San Diego

Why is life worth living? What makes actions right or wrong? What is reality and how do we know it? The Brain and the Meaning of Life draws on research in philosophy, psychology, and neuroscience to answer some of the most pressing questions about life’s nature and value. Paul Thagard argues that evidence requires the abandonment of many traditional ideas about the soul, free will, and immortality, and shows how brain science matters for fundamental issues about reality, morality, and the meaning of life. The ongoing Brain Revolution reveals how love, work, and play provide good reasons for living.

**Machiavelli’s God**

Maurizio Viroli

Translated by Antony Shugaar

To many readers of *The Prince*, Machiavelli appears to be deeply un-Christian or even anti-Christian, a cynic who thinks rulers should use religion only to keep their subjects in check. But in *Machiavelli’s God*, Maurizio Viroli, one of the world’s leading authorities on Machiavelli, argues that Machiavelli, far from opposing Christianity, thought it was crucial to republican social and political renewal—but that first it needed to be renewed itself. And without understanding this, Viroli contends, it is impossible to comprehend Machiavelli’s thought.

“Hermann Weyl ranks among the greatest mathematicians, and his deep contributions to physics were decades ahead of their time. But to know him only through his science is to miss the soul of a seeker. For Weyl, the experienced world in all its aspects was an inexhaustible source of wonder and inspiration. Here you can share in the life adventure of a beautiful mind.”

—Frank Wilczek, Nobel Laureate in Physics

Peter Pesic is Tutor and Musician-in-Residence at St. John’s College in Santa Fe, New Mexico.

When mathematician Hermann Weyl decided to write a book on philosophy, he faced what he referred to as “conflicts of conscience”—the objective nature of science, he felt, did not mesh easily with the incredulous, uncertain nature of philosophy.

Yet the two disciplines were already intertwined. In Philosophy of Mathematics and Natural Science, Weyl examines how advances in philosophy were led by scientific discoveries—the more mankind understood about the physical world, the more curious we became.

“Park writes with bemusement at human folly but also with outrage at the misappropriation of science.”

—Robert A. Segal, Times Higher Education

“Superstition is more than an entertaining romp through the weird and wonderful. It is an important contribution to the sceptical literature … that every scientist needs to be aware of.”

*Volume 1* is the first English translation and commentary of Kierkegaard’s journals based on up-to-date scholarship. It offers new insight into Kierkegaard’s inner life. In addition to early drafts of his published works, the journals contain his thoughts on current events and philosophical and theological matters, notes on books he was reading, miscellaneous jottings, and ideas for future literary projects.

**Educating Scholars**
Doctoral Education in the Humanities
Ronald G. Ehrenberg, Harriet Zuckerman, Jeffrey A. Groen & Sharon M. Brucker

“Educating Scholars tells the story of one of the most ambitious educational experiments attempted in the past twenty-five years at America’s top universities. The authors take us on a journey into the training of humanists and the efforts to transform some parts of their experience. It is full of interesting ambitions, fascinating information and ideas, false starts, unexpected encounters with changing conditions in the academic marketplace, and a set of results that were largely unanticipated. If you are interested in the humanities and in our nation’s best universities, this is the book you must read.”
—Jonathan R. Cole, Columbia University

Ronald G. Ehrenberg is the Irving M. Ives Professor of Industrial and Labor Relations and Economics at Cornell University and director of the Cornell Higher Education Research Institute. Harriet Zuckerman is senior vice president of the Andrew W. Mellon Foundation and professor emerita of sociology at Columbia University. Jeffrey A.
