Chapter 1 ECOLOGICAL MECHANICS

<i>An Introduction</i>	1
Mechanics and Ecology Combined: Coral Reefs	1
Response Functions	5
Transport Phenomena	6
What's in a Name?	7
What's Left Out	8
A Road Map	9
Online Supplements	9
A Note on Notation	9

Part I Basic Concepts

Chapter 2 BASIC PHYSICS AND MATH

	13
Location	13
Dimensions and Units of Measure	13
Converting Units	15
Trigonometry	15
Translation	16
Translational Velocity	17
Translational Acceleration	18
Rotation	19
Force and Translational Acceleration	20
Moment and Rotational Acceleration	21
Momentum	23
Pressure	24
Buoyancy	25
Energy	26

Conservation of Energy	30
Friction	31
Power	31
Summary	32
Online Supplements	
2.1 Centripetal Acceleration	
2.2 The Rotational Moment of Inertia for a Cylinder	
2.3 Calculating Distance Using Calculus	
2.4 Resting Mass	
Chapter 3 RESPONSE FUNCTIONS	33
Concepts and Terminology	33
Monotonic Functions	34
Peaks and Valleys: Unimodal Response Functions	39
Complications	43
Jensen's Inequality: The Fallacy of the Average	45
Linear versus Nonlinear	46
The Effects of Nonlinearity	47
Concepts and Conclusions	50
Online Supplements	
3.1 Scope for Growth in Anemones	
3.2 Modeling Reaction Norms	
3.3 The Mean of a Linear Function Equals the Function of the Mean	

Part II The Mechanics of Transport

Chapter 4 DIFFUSION	
<i>Random Motion and its Consequences</i>	55
Rules of a Random Walk	55
Average Position	56
Dispersion: The Variance of Position	57
The Diffusion Coefficient	59
What Drives Random Walks?	61
Fick's Equation	67

The Maximum Size of Phytoplankton	69
Concepts and Conclusions	71
Online Supplements	
4.1 The Exponential Distribution of Intervals	
4.2 Steady Concentration Gradient in a Radially Symmetrical System	
Chapter 5 AN INTRODUCTION TO FLUID MECHANICS	72
Shear	72
What Is a Fluid?	72
Liquids and Gases	73
Dynamic Viscosity	75
Viscous Friction	77
Reynolds Number	77
Conservation of Mass and Volume	80
Streamlines	81
Conservation of Energy: Bernoulli's Principle	82
Concepts, Conclusions, and Caveats	84
Online Supplements	
5.1 Why Are Air and Water Viscous?	
5.2 Deriving Bernoulli's Equation	
Chapter 6 BOUNDARY LAYERS I	
<i>Equilibrium Layers</i>	86
Basic Concepts	87
Laminar Boundary Layers: An Introduction	87
Moment and Rotation	91
Turbulent Boundary Layers: An Introduction	92
The Onset of Turbulence	93
Turbulent Shear Stress	95
Reynolds Shear Stress	96
The Turbulent Velocity Profile	98
Measuring u_*	101
Sweeps and Bursts	102
Concepts, Conclusions, and Caveats	103
Online Supplements	
6.1 Solving for the Laminar Velocity Profile	

6.2 Reynolds Stress	
6.3 Deriving the Law of the Wall for Smooth Plates	

Chapter 7 BOUNDARY LAYERS II

<i>Dynamic Layers</i>	105
Boundary-Layer Thickness Defined	105
Thickness of Dynamic Laminar Boundary Layers	106
Shear Stress in Dynamic Laminar Boundary Layers	109
Mass Transport	110
The Dynamic Laminar Velocity Profile	114
Dynamic Turbulent Boundary Layers	115
Mass Flux in Turbulent Boundary Layers	116
Oscillating Flow	117
Concepts, Conclusions, and Caveats	120
Online Supplements	
7.1 Converting OH^- Concentration to pH	
7.2 The Blasius Profile	
7.3 z of u_{max}	

Chapter 8 FLUID-DYNAMIC FORCES I

<i>Introduction and Low-Reynolds-Number Flows</i>	121
Drag at Low Reynolds Number	122
Low-Re Ecomechanics: Sensory Ecology and Predator-Prey Interactions	126
Concepts, Conclusions, and Caveats	129
Online Supplements	
8.1 Sinking Rates of Diatoms	
8.2 Fluid Strain Around a Sphere	

Chapter 9 FLUID-DYNAMIC FORCES II

<i>High Reynolds Numbers</i>	131
Forces	131
Force Coefficients	142
Rules of Thumb	150
Ecomechanical Examples	152
Concepts, Conclusions, and Caveats	156
Online Supplements	
9.1 Pressure Gradient in an Accelerating Fluid	

- 9.2 Acceleration Reaction of a Moving Object in a Moving Fluid
- 9.3 Viscous Drag at High Re
- 9.4 Defining the Coefficient of Viscous Drag, C_{DV}
- 9.5 Waves in the Surf Zone

Chapter 10 LOCOMOTION 158

- The Physics of Locomotion 158
- Sources of Power: The Motors 162
- Drifting: Passive Locomotion 167
- Crawling: Adhesive Locomotion 168
- Burrowing 171
- Walking and Running 172
- Wheels 174
- Swimming 175
- Gliding Flight 177
- Flapping Flight 180
- Speed and Power of Transport: A Summary 182
- Cost of Transport 183
- Climbing and Jumping 186
- Locomotion in Context 188
- Winter Migration 189
- Concepts, Conclusions, and Caveats 193

Online Supplements

- 10.1 Muscle Kinetics
- 10.2 The Power of Adhesive Locomotion
- 10.3 Speed of Muscle Contraction in a Snail
- 10.4 Bending Cilia
- 10.5 Internal Power of Legged Locomotion
- 10.6 Mechanics of Flagellar Thrust
- 10.7 Components of Drag in Flight
- 10.8 Acceleration in a Jump
- 10.9 When Is It Viable to Migrate?

Chapter 11 THERMAL MECHANICS I

Introduction, Solar Heating, Convection, Metabolism, and Evaporation 195

- Why Temperature Matters 196
- Heat-Budget Models: A Prospectus 197

Heat	198
Temperature	199
Specific Heat	200
Thermal Diffusion	200
Latent Heat	201
The Heat Budget	201
Solar Heating	202
Convective Heat Transport	206
A Convection-Dominated System: Littorine Snails	209
Metabolism	212
Evaporation and Condensation	214
Systems Dominated by Convection and Evaporation: Desert Herbs and Seaweeds	215
Concepts and Interim Conclusions	219

Online Supplements

11.1 Measuring Temperature	
11.2 Solar Heat Influx	
11.3 Measuring the Heat-Transfer Coefficient	
11.4 A Nontraditional Mass-Transfer Coefficient	
11.5 Relating Mass Transfer to Heat Transfer	
11.6 Calculating Wet-Bulb Temperature	

Chapter 12 THERMAL MECHANICS II

Stored Energy, Conduction, Long-Wave Radiation, and Synthesis

Stored Energy	221
Conductive Heat Transport	224
Long-Wave Radiative Heat Transfer	229
The Heat Budget Revisited	235
The Environmental Niche	237
Concepts, Conclusions, and Caveats	240

Online Supplements

12.1 Response Time	
12.2 Calculating the Thermal Gradient	
12.3 Linearizing Long-Wave Heat Exchange	
12.4 Emissivity of the Sky	
12.5 Solving the Time-Dependent Heat-Budget Equation	

Part III Solid Mechanics

Chapter 13 BIOLOGICAL MATERIALS I

<i>Materials Mechanics</i>	245
Bonding Forces	245
Why Solids Are Elastic	249
Theoretical Strength of Solids	250
Polymers and Soft Elasticity	251
Rubber Elasticity	253
Viscoelasticity	254
Load	255
Stress	255
Strain	258
Elastic Modulus	261
Strain Energy	264
Failure	266
Concepts, Conclusions, and Caveats	267
Online Supplements	
13.1 An Alternative Perspective on Shear Loading	
13.2 The Utility of True Strain	
13.3 The Standard Linear Solid	
13.4 Calculating Strain Energy	

Chapter 14 BIOLOGICAL MATERIALS II

<i>The Spectrum of Biological Materials</i>	268
Stiffness	268
Strength	271
Toughness	271
Composite Materials	272
Designing a Giant Kelp	276
Mussels, Patch Dynamics, and Disturbance	278
Concepts, Conclusions, and Caveats	280
Online Supplements	
14.1 Mechanical Design of Anemones	
14.2 Force from Pressure in a Cylinder	
14.3 Unidirectional Fiber Reinforcement	
14.4 Multidirectional Fiber Reinforcement	

Chapter 15	FRACTURE MECHANICS AND FATIGUE	282
	Stress Concentrations	282
	Energy and Fracture	284
	Breaking Stress	287
	Fracture Toughness	288
	Crack Stoppers	290
	Fatigue	291
	Fracture and Fatigue in Evolution	294
	Concepts, Conclusions, and Caveats	295
Chapter 16	ADHESION AND ADHESION RESISTANCE	297
	Attachment and Adhesion	297
	Close Physical Contact	298
	Pressure-Difference Adhesion	302
	Surface Tension and Surface Energy	304
	Interaction at the Interface	306
	Capillary Adhesion	308
	Viscous Adhesion	309
	Glue	311
	Adhesives Compared	312
	Adhesion Is Easy	313
	Adhesion in Reverse	315
	Concepts, Conclusions, and Caveats	318
Chapter 17	STATICS	
	<i>Bending and Twisting</i>	319
	Bending	319
	Specifying I	323
	Cantilever Bending	326
	Stress in Corals	328
	Shear	331
	Anemones as Beams	334
	Maximum Height	335
	Optimal Shape	338
	Torsion	341
	Concepts, Conclusions, and Caveats	343
	Online Supplements	
	17.1 I of a Circle	
	17.2 Approximate I of a Hollow Circular Cross Section	

17.3	I for Hollow Beams of Constant Volume
17.4	Thickness per Radius for a Hollow Beam
17.5	I of Complex Shapes
17.6	Deflection of a Cantilever
17.7	Stiffness of Divided Beams
17.8	Maximum Height
17.9	Optimal Shape of a Cantilever
17.10	Second Polar Moment of Area

Chapter 18 DYNAMICS

<i>The Mechanics of Oscillation</i>	345
Harmonic Oscillation	345
Damped Harmonic Motion	350
Forced Harmonic Motion	353
Abruptly Applied Loads	356
Nonlinear Springs and Chaos	359
Concepts, Conclusions, and Caveats	359
Online Supplements	
18.1 Damped Harmonic Motion	
18.2 Forced Harmonic Motion	

Part IV Ecological Mechanics

Chapter 19 ECOLOGICAL VARIATION AND ITS CONSEQUENCES

	363
Scale Transition Theory: A Brief Introduction	364
Background	366
Scale Transition Theory in Action: Intermediate Disturbance	369
Covariance	371
Examples from Nature	376
Concepts, Conclusions, and Caveats	377
Online Supplements	
19.1 Deriving the Scale Transition Equation	
19.2 S_T of Some Common Response Functions	
19.3 Poisson Interval Statistics	
19.4 The Effect of Covariance on the Mean	
19.5 The Effect of Variation in More Complicated Functions	

Chapter 20	SPECTRAL ANALYSIS	
	<i>Quantifying Variation in Time and Space</i>	379
	Sequence, Signal, and Power	380
	Fourier Series	383
	Choosing Frequencies: The Role of Harmonics	386
	Fourier Coefficients	387
	The Periodogram	388
	Specifying Fourier Coefficients	391
	The Power Spectrum	397
	Spectral Analysis in Biology	401
	Concepts, Conclusions, and Caveats	404
	Online Supplements	
	20.1 The Sum of Sine and Cosine Waves	
	20.2 Specifying Fourier Coefficients	
	20.3 β at the Nyquist Frequency	
	20.4 Practical Considerations in Spectral Analysis	
Chapter 21	QUANTIFYING THE EFFECTS OF SCALE	406
	$1/f$ Noise	406
	The Color of Spectral Data	408
	Patterns of $1/f$ Noise	408
	Asymptotes for $\beta < 1$	412
	Estimating β and k_{var}	412
	Scale Transition: An Example	413
	Other Spectra	415
	Concepts, Conclusions, and Caveats	416
	Online Supplements	
	21.1 Calculating the Time or Distance Required to Reach a Given Fraction of Maximum Variance	
	21.2 Caveats Regarding the Estimation of k_{var} and β	
	21.3 Numerically Integrating a Spectrum	
Chapter 22	BIOLOGY OF EXTREMES	419
	Statistics of Extremes	420
	Extreme Caveats	428
	An Interim Synopsis	432
	The Environmental Bootstrap	432

Evolution and Extremes	439
Bootstrap Caveats	441
Concepts and Conclusions	442
Online Supplements	
22.1 The Normal Curve	
22.2 Probability and Return Time	
22.3 Connections to the Poisson Interval Distribution	
Chapter 23 PATTERN AND SELF-ORGANIZATION	443
Facilitation-Inhibition	444
Criticality	451
Concepts, Conclusion, and Caveats	454
Chapter 24 THOUGHTS AT THE END	455
Take-Home Messages	455
Plankton Ecology	458
A Look to the Future	462
