<b>I Shock Reflection-Diffraction, Nonlinear Conservation Laws of Mixed Type, and von Neumann's Conjectures</b>	<b>1</b>
1 Shock Reflection-Diffraction, Nonlinear Partial Differential Equations of Mixed Type, and Free Boundary Problems	3
2 Mathematical Formulations and Main Theorems	16
2.1 The potential flow equation . . . . .	16
2.2 Mathematical problems for shock reflection-diffraction . . . . .	19
2.3 Weak solutions of Problem 2.2.1 and Problem 2.2.3 . . . . .	23
2.4 Structure of solutions: Regular reflection-diffraction configurations . . . . .	24
2.5 Existence of state (2) and continuous dependence on the parameters . . . . .	27
2.6 Von Neumann's conjectures, Problem 2.6.1 (free boundary problem), and main theorems . . . . .	28
3 Main Steps and Related Analysis in the Proofs of the Main Theorems	37
3.1 Normal reflection . . . . .	37
3.2 Main steps and related analysis in the proof of the sonic conjecture	37
3.3 Main steps and related analysis in the proof of the detachment conjecture . . . . .	55
3.4 Appendix: The method of continuity and fixed point theorems .	65
<b>II Elliptic Theory and Related Analysis for Shock Reflection-Diffraction</b>	<b>67</b>
4 Relevant Results for Nonlinear Elliptic Equations of Second Order	69
4.1 Notations: Hölder norms and ellipticity . . . . .	69
4.2 Quasilinear uniformly elliptic equations . . . . .	72

4.3	Estimates for Lipschitz solutions of elliptic boundary value problems . . . . .	105
4.4	Comparison principle for a mixed boundary value problem in a domain with corners . . . . .	142
4.5	Mixed boundary value problems in a domain with corners for uniformly elliptic equations . . . . .	145
4.6	Hölder spaces with parabolic scaling . . . . .	192
4.7	Degenerate elliptic equations . . . . .	197
4.8	Uniformly elliptic equations in a curved triangle-shaped domain with one-point Dirichlet condition . . . . .	207
<b>5</b>	<b>Basic Properties of the Self-Similar Potential Flow Equation</b>	<b>216</b>
5.1	Some basic facts and formulas for the potential flow equation . .	216
5.2	Interior ellipticity principle for self-similar potential flow . . . .	222
5.3	Ellipticity principle for self-similar potential flow with slip condition on the flat boundary . . . . .	227
<b>III Proofs of the Main Theorems for the Sonic Conjecture and Related Analysis</b>		<b>229</b>
<b>6</b>	<b>Uniform States and Normal Reflection</b>	<b>231</b>
6.1	Uniform states for self-similar potential flow . . . . .	231
6.2	Normal reflection and its uniqueness . . . . .	238
6.3	The self-similar potential flow equation in the coordinates flattening the sonic circle of a uniform state . . . . .	239
<b>7</b>	<b>Local Theory and von Neumann’s Conjectures</b>	<b>242</b>
7.1	Local regular reflection and state (2) . . . . .	242
7.2	Local theory of shock reflection for large-angle wedges . . . . .	245
7.3	The shock polar for steady potential flow and its properties . . .	248
7.4	Local theory for shock reflection: Existence of the weak and strong state (2) up to the detachment angle . . . . .	263
7.5	Basic properties of the weak state (2) and the definition of supersonic and subsonic wedge angles . . . . .	273
7.6	Von Neumann’s sonic and detachment conjectures . . . . .	279
<b>8</b>	<b>Admissible Solutions and Features of Problem 2.6.1</b>	<b>281</b>
8.1	Definition of admissible solutions . . . . .	281
8.2	Strict directional monotonicity for admissible solutions . . . . .	286
8.3	Appendix: Properties of solutions of Problem 2.6.1 for large-angle wedges . . . . .	305

<b>9</b>	<b>Uniform Estimates for Admissible Solutions</b>	<b>319</b>
9.1	Bounds of the elliptic domain $\Omega$ and admissible solution $\varphi$ in $\Omega$	319
9.2	Regularity of admissible solutions away from $\Gamma_{\text{shock}} \cup \Gamma_{\text{sonic}} \cup \{P_3\}$	322
9.3	Separation of $\Gamma_{\text{shock}}$ from $\Gamma_{\text{sym}}$	339
9.4	Lower bound for the distance between $\Gamma_{\text{shock}}$ and $\Gamma_{\text{wedge}}$	341
9.5	Uniform positive lower bound for the distance between $\Gamma_{\text{shock}}$ and the sonic circle of state (1)	354
9.6	Uniform estimates of the ellipticity constant in $\bar{\Omega} \setminus \bar{\Gamma}_{\text{sonic}}$	369
<b>10</b>	<b>Regularity of Admissible Solutions away from the Sonic Arc</b>	<b>382</b>
10.1	$\Gamma_{\text{shock}}$ as a graph in the radial directions with respect to state (1)	382
10.2	Boundary conditions on $\Gamma_{\text{shock}}$ for admissible solutions	385
10.3	Local estimates near $\Gamma_{\text{shock}}$	387
10.4	The critical angle and the distance between $\Gamma_{\text{shock}}$ and $\Gamma_{\text{wedge}}$	389
10.5	Regularity of admissible solutions away from $\Gamma_{\text{sonic}}$	390
10.6	Regularity of the limit of admissible solutions away from $\Gamma_{\text{sonic}}$	392
<b>11</b>	<b>Regularity of Admissible Solutions near the Sonic Arc</b>	<b>396</b>
11.1	The equation near the sonic arc and structure of elliptic degeneracy	396
11.2	Structure of the neighborhood of $\Gamma_{\text{sonic}}$ in $\Omega$ and estimates of $(\psi, D\psi)$	398
11.3	Properties of the Rankine-Hugoniot condition on $\Gamma_{\text{shock}}$ near $\Gamma_{\text{sonic}}$	413
11.4	$C^{2,\alpha}$ -estimates in the scaled Hölder norms near $\Gamma_{\text{sonic}}$	421
11.5	The reflected-diffracted shock is $C^{2,\alpha}$ near $P_1$	431
11.6	Compactness of the set of admissible solutions	434
<b>12</b>	<b>Iteration Set and Solvability of the Iteration Problem</b>	<b>440</b>
12.1	Statement of the existence results	440
12.2	Mapping to the iteration region	440
12.3	Definition of the iteration set	461
12.4	The equation for the iteration	469
12.5	Assigning a boundary condition on the shock for the iteration	485
12.6	Normal reflection, iteration set, and admissible solutions	504
12.7	Solvability of the iteration problem and estimates of solutions	505
12.8	Openness of the iteration set	520
<b>13</b>	<b>Iteration Map, Fixed Points, and Existence of Admissible Solutions up to the Sonic Angle</b>	<b>524</b>
13.1	Iteration map	524
13.2	Continuity and compactness of the iteration map	528
13.3	Normal reflection and the iteration map for $\theta_w = \frac{\pi}{2}$	530
13.4	Fixed points of the iteration map for $\theta_w < \frac{\pi}{2}$ are admissible solutions	531
13.5	Fixed points cannot lie on the boundary of the iteration set	557

13.6	Proof of the existence of solutions up to the sonic angle or the critical angle . . . . .	559
13.7	Proof of Theorem 2.6.2: Existence of global solutions up to the sonic angle when $u_1 \leq c_1$ . . . . .	559
13.8	Proof of Theorem 2.6.4: Existence of global solutions when $u_1 > c_1$	562
13.9	Appendix: Extension of the functions in weighted spaces . . . .	564
<b>14</b>	<b>Optimal Regularity of Solutions near the Sonic Circle</b>	<b>586</b>
14.1	Regularity of solutions near the degenerate boundary for nonlinear degenerate elliptic equations of second order . . . . .	586
14.2	Optimal regularity of solutions across $\Gamma_{\text{sonic}}$ . . . . .	599
<b>IV</b>	<b>Subsonic Regular Reflection-Diffraction and Global Existence of Solutions up to the Detachment Angle</b>	<b>613</b>
<b>15</b>	<b>Admissible Solutions and Uniform Estimates up to the Detachment Angle</b>	<b>615</b>
15.1	Definition of admissible solutions for the supersonic and subsonic reflections . . . . .	615
15.2	Basic estimates for admissible solutions up to the detachment angle . . . . .	617
15.3	Separation of $\Gamma_{\text{shock}}$ from $\Gamma_{\text{sym}}$ . . . . .	618
15.4	Lower bound for the distance between $\Gamma_{\text{shock}}$ and $\Gamma_{\text{wedge}}$ away from $P_0$ . . . . .	618
15.5	Uniform positive lower bound for the distance between $\Gamma_{\text{shock}}$ and the sonic circle of state (1) . . . . .	621
15.6	Uniform estimates of the ellipticity constant . . . . .	622
15.7	Regularity of admissible solutions away from $\Gamma_{\text{sonic}}$ . . . . .	625
<b>16</b>	<b>Regularity of Admissible Solutions near the Sonic Arc and the Reflection Point</b>	<b>629</b>
16.1	Pointwise and gradient estimates near $\Gamma_{\text{sonic}}$ and the reflection point . . . . .	629
16.2	The Rankine-Hugoniot condition on $\Gamma_{\text{shock}}$ near $\Gamma_{\text{sonic}}$ and the reflection point . . . . .	633
16.3	A priori estimates near $\Gamma_{\text{sonic}}$ in the supersonic-away-from-sonic case . . . . .	635
16.4	A priori estimates near $\Gamma_{\text{sonic}}$ in the supersonic-near-sonic case .	636
16.5	A priori estimates near the reflection point in the subsonic-near-sonic case . . . . .	656
16.6	A priori estimates near the reflection point in the subsonic-away-from-sonic case . . . . .	665

<b>17 Existence of Global Regular Reflection-Diffraction Solutions up to the Detachment Angle</b>	<b>690</b>
17.1 Statement of the existence results . . . . .	690
17.2 Mapping to the iteration region . . . . .	690
17.3 Iteration set . . . . .	707
17.4 Existence and estimates of solutions of the iteration problem . .	725
17.5 Openness of the iteration set . . . . .	737
17.6 Iteration map and its properties . . . . .	741
17.7 Compactness of the iteration map . . . . .	745
17.8 Normal reflection and the iteration map for $\theta_w = \frac{\pi}{2}$ . . . . .	747
17.9 Fixed points of the iteration map for $\theta_w < \frac{\pi}{2}$ are admissible solutions . . . . .	747
17.10 Fixed points cannot lie on the boundary of the iteration set . . .	752
17.11 Proof of the existence of solutions up to the critical angle . . . .	753
17.12 Proof of Theorem 2.6.6: Existence of global solutions up to the detachment angle when $u_1 \leq c_1$ . . . . .	753
17.13 Proof of Theorem 2.6.8: Existence of global solutions when $u_1 > c_1$ . . . . .	753
<b>V Connections and Open Problems</b>	<b>754</b>
<b>18 The Full Euler Equations and the Potential Flow Equation</b>	<b>757</b>
18.1 The full Euler equations . . . . .	757
18.2 Mathematical formulation I: Initial-boundary value problem . .	761
18.3 Mathematical formulation II: Boundary value problem . . . . .	762
18.4 Normal reflection . . . . .	768
18.5 Local theory for regular reflection near the reflection point . . .	769
18.6 Von Neumann's conjectures . . . . .	777
18.7 Connections with the potential flow equation . . . . .	781
<b>19 Shock Reflection-Diffraction and New Mathematical Challenges</b>	<b>785</b>
19.1 Mathematical theory for multidimensional conservation laws . .	785
19.2 Nonlinear partial differential equations of mixed elliptic-hyperbolic type . . . . .	788
19.3 Free boundary problems and techniques . . . . .	790
19.4 Numerical methods for multidimensional conservation laws . . .	791
<b>Bibliography</b>	<b>794</b>
<b>Index</b>	<b>815</b>
