Overview	1
PART 1. MAPPING CLASS GROUPS	15
1. Curves, Surfaces, and Hyperbolic Geometry	17
1.1 Surfaces and Hyperbolic Geometry	17
1.2 Simple Closed Curves	22
1.3 The Change of Coordinates Principle	36
1.4 Three Facts about Homeomorphisms	41
2. Mapping Class Group Basics	44
2.1 Definition and First Examples	44
2.2 Computations of the Simplest Mapping Class Groups	47
2.3 The Alexander Method	58
3. Dehn Twists	64
3.1 Definition and Nontriviality	64
3.2 Dehn Twists and Intersection Numbers	69
3.3 Basic Facts about Dehn Twists	73
3.4 The Center of the Mapping Class Group	75
3.5 Relations between Two Dehn Twists	77
3.6 Cutting, Capping, and Including	82
4. Generating the Mapping Class Group	89
4.1 The Complex of Curves	92
4.2 The Birman Exact Sequence	96
4.3 Proof of Finite Generation	104
4.4 Explicit Sets of Generators	107
5. Presentations and Low-dimensional Homology	116
5.1 The Lantern Relation and $H_1(\text{Mod}(S); \mathbb{Z})$	116
5.2 Presentations for the Mapping Class Group	124
5.3 Proof of Finite Presentability	134

5.4	Hopf's Formula and $H_2(\text{Mod}(S); \mathbb{Z})$	140
5.5	The Euler Class	146
5.6	Surface Bundles and the Meyer Signature Cocycle	153
6.	The Symplectic Representation and the Torelli Group	162
6.1	Algebraic Intersection Number as a Symplectic Form	162
6.2	The Euclidean Algorithm for Simple Closed Curves	166
6.3	Mapping Classes as Symplectic Automorphisms	168
6.4	Congruence Subgroups, Torsion-free Subgroups, and Residual Finiteness	176
6.5	The Torelli Group	181
6.6	The Johnson Homomorphism	190
7.	Torsion	200
7.1	Finite-order Mapping Classes versus Finite-order Homeomorphisms	200
7.2	Orbifolds, the $84(g-1)$ Theorem, and the $4g+2$ Theorem	203
7.3	Realizing Finite Groups as Isometry Groups	213
7.4	Conjugacy Classes of Finite Subgroups	215
7.5	Generating the Mapping Class Group with Torsion	216
8.	The Dehn–Nielsen–Baer Theorem	219
8.1	Statement of the Theorem	219
8.2	The Quasi-isometry Proof	222
8.3	Two Other Viewpoints	236
9.	Braid Groups	239
9.1	The Braid Group: Three Perspectives	239
9.2	Basic Algebraic Structure of the Braid Group	246
9.3	The Pure Braid Group	248
9.4	Braid Groups and Symmetric Mapping Class Groups	253
PART 2.	TEICHMÜLLER SPACE AND MODULI SPACE	261
10.	Teichmüller Space	263
10.1	Definition of Teichmüller Space	263
10.2	Teichmüller Space of the Torus	265
10.3	The Algebraic Topology	269
10.4	Two Dimension Counts	272
10.5	The Teichmüller Space of a Pair of Pants	275
10.6	Fenchel–Nielsen Coordinates	278
10.7	The $9g-9$ Theorem	286
11.	Teichmüller Geometry	294
11.1	Quasiconformal Maps and an Extremal Problem	294
11.2	Measured Foliations	300
11.3	Holomorphic Quadratic Differentials	308
11.4	Teichmüller Maps and Teichmüller's Theorems	320
11.5	Grötzsch's Problem	325

11.6	Proof of Teichmüller's Uniqueness Theorem	327
11.7	Proof of Teichmüller's Existence Theorem	330
11.8	The Teichmüller Metric	337
12.	Moduli Space	342
12.1	Moduli Space as the Quotient of Teichmüller Space	342
12.2	Moduli Space of the Torus	345
12.3	Proper Discontinuity	349
12.4	Mumford's Compactness Criterion	353
12.5	The Topology at Infinity of Moduli Space	359
12.6	Moduli Space as a Classifying Space	362
PART 3.	THE CLASSIFICATION AND PSEUDO-ANOSOV THEORY	365
13.	The Nielsen–Thurston Classification	367
13.1	The Classification for the Torus	367
13.2	The Three Types of Mapping Classes	370
13.3	Statement of the Nielsen–Thurston Classification	376
13.4	Thurston's Geometric Classification of Mapping Tori	379
13.5	The Collar Lemma	380
13.6	Proof of the Classification Theorem	382
14.	Pseudo-Anosov Theory	390
14.1	Five Constructions	391
14.2	Pseudo-Anosov Stretch Factors	403
14.3	Properties of the Stable and Unstable Foliations	408
14.4	The Orbits of a Pseudo-Anosov Homeomorphism	414
14.5	Lengths and Intersection Numbers under Iteration	419
15.	Thurston's Proof	424
15.1	A Fundamental Example	424
15.2	A Sketch of the General Theory	434
15.3	Markov Partitions	442
15.4	Other Points of View	445
	Bibliography	447
	Index	465
