Appendix 5.1: Coding Appendix for Fair Employment Items

In coding the fair employment items, the changes in question wording and response options required considerable care. For the Gallup and Roper items, respondents who favored national fair employment action (or favored the state law, if that was the topic of the question rather than national legislation, as in the 1945 and 1947 Gallup surveys) are coded as 1, while those opposing the law are coded as 0. Respondents who say that they either favor leaving the policy up to the states (when the alternative is a national law) or oppose any law whatsoever are coded as opponents. Within the political context of the time, it was clear that saying the policy should be "left up to the states" meant weaker support for action than did support for a national law, given that there was no chance that many states – particularly in the South – would adopt such a law. The results are robust if one treats the "up to the states" option as a middle response in between "neither" and "national law."

The 1952 NES had a similar question wording to the Gallup item and is coded analogously. The question wording was: "There is a lot of talk these days about discrimination, that is about people having trouble getting jobs because of their race. Do you think the government ought to take an interest in whether Negroes have trouble getting jobs or should it stay out of this problem. (IF government should take an interest). Do you think we need laws to deal with this problem or are there other ways that will handle it better? (If yes to laws, ask: Do you think the national government should handle this or do you think it should be left for each state to handle in its own way?). Respondents favoring a national law are coded as 1, those arguing it should be left to the states or that no action should be taken are coded as 0.

The NES question in 1956-60 asked: "If Negroes are not getting fair treatment in jobs and housing, the government should see to it that they do." The response options ranged from "Agree strongly" to "Disagree strongly." To keep the question scaled from 0 to 1, I coded "disagree strongly" = 0, "disagree" = .25, "agree" = .75, and "strongly agree" = 1. Depends, Not Sure, and No Opinion were coded as .5. The results are robust to alternative codings, but this kept the range of the dependent variable similar to that for the Gallup and Roper items.

In 1964, the question wording was changed to: "Some people feel that if Negroes are not getting fair treatment in jobs, the government in Washington ought to see to it that they do. Others feel that this is not the Federal government's business. Have you had enough interest in this question to favor one side over the other? If yes, how do you feel?" The survey then followed up by asking if the respondent's mind was "made up" or s/he had "some doubts." Respondents who favored the federal government seeing to fair treatment and who had their minds made up were coded as 1; those who favored the government role but had "some doubts" were coded as .75. Respondents with no opinion or "it depends" responses were coded as .5. Respondents who favored leaving it to the states but who had some doubts were coded as .25; respondents who favored leaving it to the states but with no doubts were coded as 0. Again, the results are robust to alternative codings of the variable but this kept the range of the dependent variable similar to the

Gallup and Roper items. The 1968 and 1972 versions of the question did not include the follow-up asking if respondents' minds were made up, as a result the codes for that question are simply 0 (oppose national action), .5 (uncertain, depends), and 1 (favor national action).

Ouestion wording:

- 1. Fine and imprison local police officers who fail to protect a prisoner from a lynch mob
- 2. Make a county in which a lynching occurs pay a fine up \$10,000 to the victim or his family (Note this is Gallup 181; seem to have same item on Gallup 182 and get same pattern but only asked of 1/3 of sample roughly—missing data for 2/3 unclear why but seem like real problems with that dataset so omit)

Variant 4: "At present, state governments deal with most crimes committed in their own state. In the case of a lynching, do you think the U.S. (United States) (federal) government should have the right to step in and deal with the crime--or do you think this should be left entirely to the state and local governments?"

^{1. &}quot;Should Congress enact a law which would make lynching a federal crime?" (Gallup 63, 96, 102). Variant 1: "If a local peace officer is negligent in protecting a prisoner from a lynch mob, should the federal government have the right to punish this peace officer?" (Gallup 104)

Variant 2: "Congress is now considering a lynching bill which gives the Federal government power to: fine and imprison local policemen who are negligent in protecting a prisoner from a lynch mob, and also to make a county in which a lynching occurs pay a fine up to \$10,000 to the victim or his family. Do you approve of this bill?" (Gallup 106). Variant 3: Congress is now considering a bill against lynching which would punish lynching in these two ways: Will you please read this card and tell me whether you approve or disapprove of this bill against lynching? Code for hand card:

Question wording:

Variant 2 (Gallup 419, Form T): It has been suggested that white and colored men serve together throughout the U.S. armed services – that is, live and work together in the same units. Do you think this is a good idea or a poor idea?

^{1.} Some Southern states require every other voter to pay a poll tax amounting to about a dollar a year before they can vote. Do you think these poll taxes should be abolished? (Gallup 226). Variant 1 (asked only in MN and south): Should the poll tax be abolished as a requirement for voting in this state? (Gallup 230, 232)

^{2.} Should negro and white soldiers serve together in all branches of the armed forces? (Gallup 270).

Variant 1 (Gallup 419, Form K): Would you favor or oppose having negro and white troops throughout the U.S. armed services live and work together – or should they be separated as they are now?

Question wording:

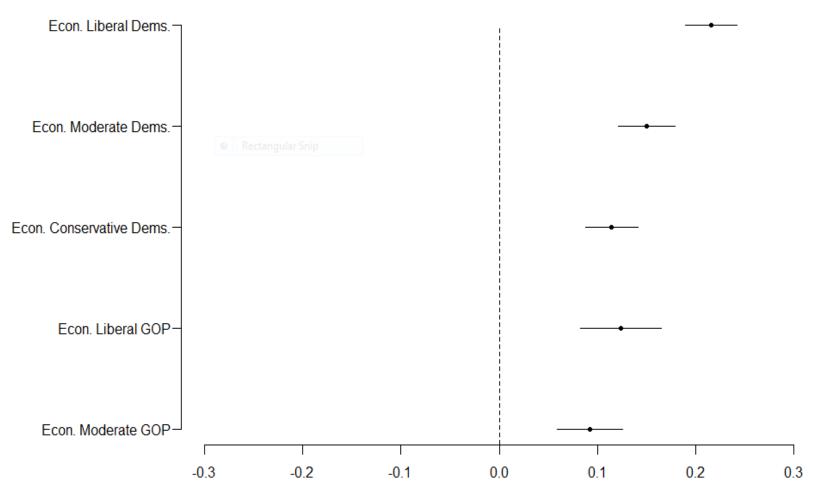

- 1. Do you favor or oppose a law in this state which would require employers to hire a person if he is qualified for the job, regardless of his race or color? (349K, 400K) Variant 1: Would you favor or oppose a state law which would require employees to work along side persons of any race or color? (349T, 400T)
- 2. Do you favor or oppose a Federal law (for all the states) which would require employers to hire a person if he is qualified for the job--regardless of his nationality, religion, race, or color? (Gallup 409T). Form K: Very similar question but filter about whether heard of the proposed law and refer to "religion, race, or color" (not nationality).
- 3. A federal law has been proposed which says that no person could be denied a job because of his religion, color, or nationality. Would you like to have your congressman vote for or against this proposed law? Followed by probe for strength of view.
- 4. "One of Truman's proposals concerns employment practices. How far do you yourself think the federal government should go in requiring employers to hire people without regard to their race, religion, color, or nationality?" (Gallup 414, 433, 439, 450).
- 5. "Some people say we should have a national law requiring employers to hire people without regard to color or race. Other people say that it should be left up to each state to decide on this for itself. With which side do you yourself agree?" (Gallup 495, 510)
- 6. Which of these statements best describes what you'd like to see done about legislation to prohibit employers from turning people down solely because of their race or religion?

 (a) There should be a national law to protect minorities from discrimination in hiring; (b) It should be left up to each state to pass such a law if it wants one; (c) There shouldn't be any law like that; the problem should be worked out some other way; (d) Don't Know. (Roper 1952-059; Note partisans are defined by party identification since Roper did not ask retrospective vote in this survey)

Variant 1: asked by Roper in March 1957 – "Which of these statements best expresses your feelings about legislation to prohibit employers – when they are hiring employees – from turning people down solely because of their race or religion? (a) Have federal laws passed by Congress to prevent discrimination in hiring; (b) Leave it up to each state to pass their own anti-discrimination laws, if they want them; (c) It would be better not to have any laws at all of this kind and work the problem out some other way. (Roper 1957-103; Note Roper did not ask about vote choice in this survey. As a result, partisans are identified by party identification not vote)
