Preface xix

How to Use This Book xxiii

Acknowledgments xxvii

I Sound Itself 1

1 How Sound Propagates 3

- 1.1 Push and Pushback: Impedance 6
 - What Is Impedance, Really? 8
 - Antireflection Strategies 9
 - Impedance and the Violin 10
 - Bullwhip—The High Art of Impedance Matching 11
 - Impedance Mismatches Are Not Always Bad 11
 - Impedance of Masses and Springs Together 12
 - Defining and Measuring Impedance 12
- 1.2 Impedance of Air 13
- 1.3 Propagation of Sound in Pipes 16
 - Reflection of Sound at a Closed End 17
 - Reflection of Sound at an Open End 17
 - Reflection of Sound at the Junction of Different-diameter Pipes 19

2 Wave Phenomenology 21

- 2.1 Relation between Speed, Frequency, and Wavelength 21
- 2.2 Falloff with Distance from the Source 23Loudness Falloff with Distance 24
 - Loudiness Failon With Distance
 - Ripple Simulation 25
- 2.3 Measuring the Speed of Sound 26
 - Box 2.1 Father Marin Mersenne 27

viii Contents

	2.4	Interference and Superposition 27	
			29
	2.5	Reflection 29	
		Shiny and Matte 30	
		Refraction 32	
	2.7	Diffraction 34	
		Diffraction at an Edge 35	
		Brush with the Law of Similarity 36	
		Active Noise Reduction of Diffracted Sound 37	
		Schlieren Photography 38	
	2.9	Ray Tracing 39	
		Corner (Retro-) Reflector 40	
		■ Box 2.2 The SOFAR Channel 43	
	2.10	Measures of Sound Power 44	
		■ Box 2.3 How Big? 47	
Ш	Analy	zing Sound 49	
3	Sound	and Sinusoids 51	
	3.1	The Atom of Sound 52	
		Building a Sine Wave 52	
	3.2	Sinusoidal Vibration 54	
		The Velocity 55	
		The Tuning Fork 56	
		The Sound of a Sinusoid 58	
	3.3	The Pendulum 58	
	3.4	The Double Tuning Fork 59	
	3.5	Microscopes for Vibration 62	
	3.6	Spying on Conversations 64	
	3.7	Fourier Decomposition 64	
	3.8	Power Spectra 66	
	3.9	Periodic Functions 68	
	3.10	Aperiodic Signals and Vibrations 69	
4	The Po	ower of Autocorrelation 71	
	4.1	Obtaining Autocorrelation Functions 74	
		■ Box 4.1 Autocorrelation Example: Temperature in Fairbanks	72
	4.2	Autocorrelation and Power for a Sum of Sinusoids 74	
		Getting the Autocorrelation 74	
		Computing the Power Spectrum 76	
	4.3	Autocorrelation for Any Signal 76	
		Computing the Autocorrelation 77	
		Autocorrelation by Color 77

Contents ix

	4.4	Power Spectrum from a General Autocorrelation 79
		Power Spectrum by Color 81
		The Wiener-Khinchin Theorem 82
	4.5	The Uncertainty Principle 82
	4.6	Autocorrelation and the Chorus Effect 85
	4.7	Noise and Autocorrelation 87
		Autocorrelation and Fast Echoes 87
		Masking Signals with Noise 87
		■ Box 4.2 Famous Fourier Transform Pairs 88
5	Sonog	rams 89
	5.1	What Is a Sonogram? 89
	5.2	Choosing Sonogram Parameters 91
6	Captu	ring and Re-creating Sound 93
	6 .1	
	6.2	
	6.3	Microphones and Loudspeakers 97
	6.4	
		The Problem of Head Movement and Visual Concordance 99
		The Edison Diamond Disc Phonograph 99
	6.5	_ :
		,
	6.6	Impulse Response and the Re-creation of a Soundspace 103
II		Impulse Response and the Re-creation of a Soundspace 103 ing Sound 105
	I Maki	
	I Maki	ing Sound 105
	I Mak i Source	ing Sound 105 es of Sound 107
	I Mak i Source	ing Sound 105 es of Sound 107 Amplification without Active Amplifiers 108
	I Maki Source 7.1	ing Sound 105 es of Sound 107 Amplification without Active Amplifiers 108 Walls as Passive Amplifiers 109
	I Maki Source 7.1	ing Sound 105 es of Sound 107 Amplification without Active Amplifiers 108 Walls as Passive Amplifiers 109 Reactive versus Resistive Forces 110
	I Maki Source 7.1	ing Sound 105 es of Sound 107 Amplification without Active Amplifiers 108 Walls as Passive Amplifiers 109 Reactive versus Resistive Forces 110 The Method of Images 111
	Source 7.1	ing Sound 105 es of Sound 107 Amplification without Active Amplifiers 108 Walls as Passive Amplifiers 109 Reactive versus Resistive Forces 110 The Method of Images 111 The 30-degree Wedge 112
	Source 7.1	ing Sound 105 es of Sound 107 Amplification without Active Amplifiers 108 Walls as Passive Amplifiers 109 Reactive versus Resistive Forces 110 The Method of Images 111 The 30-degree Wedge 112 The Horn 114
	Source 7.1	ing Sound 105 es of Sound 107 Amplification without Active Amplifiers 108 Walls as Passive Amplifiers 109 Reactive versus Resistive Forces 110 The Method of Images 111 The 30-degree Wedge 112 The Horn 114 Şafi al-Dīn Gets It Right in the Thirteenth Century 114
	Source 7.1	ing Sound 105 es of Sound 107 Amplification without Active Amplifiers 108 Walls as Passive Amplifiers 109 Reactive versus Resistive Forces 110 The Method of Images 111 The 30-degree Wedge 112 The Horn 114 Şafī al-Dīn Gets It Right in the Thirteenth Century 114 Low-frequency Piston Source 116
	I Maki Source 7.1	ing Sound 105 es of Sound 107 Amplification without Active Amplifiers 108 Walls as Passive Amplifiers 109 Reactive versus Resistive Forces 110 The Method of Images 111 The 30-degree Wedge 112 The Horn 114 Şafi al-Dīn Gets It Right in the Thirteenth Century 114 Low-frequency Piston Source 116 Monopole Source in a Pipe 117
	I Maki Source 7.1	ing Sound 105 es of Sound 107 Amplification without Active Amplifiers 108 Walls as Passive Amplifiers 109 Reactive versus Resistive Forces 110 The Method of Images 111 The 30-degree Wedge 112 The Horn 114 Şafi al-Din Gets It Right in the Thirteenth Century 114 Low-frequency Piston Source 116 Monopole Source in a Pipe 117 Horns as Impedance Control 117

x Contents

	7.6	Law of Cimilarity 120	
		Law of Similarity 130 Dipole Sources 131	
	7.7		
		Dipoles as Acoustical Short-circuiting 132	
		Dipoles as Destructive Interference 132	
		Example Dipole Sources 133	
		Relative Phase of Loudspeakers 134	
		Simulations of a Dipole Source 135	
		Baffling a Dipole 136	
	7.8	Tuning Fork—A Quadrupole Source 137	
	7.9	Supersonic Sources 138	
		Lightning and Thunder 142	
	7.10	Sound Launched by Surfaces 142	
		Sound Launched by a Baffled Piston 143	
		Building Up Larger Pistons from Small Ones 144	
		Force Goes in Phase with Velocity for Larger Pistons	145
	7.11	Sound Launched by Surface-bending Waves 146	
		Supersonic versus Subsonic Surface Waves 148	
		The Critical Frequency 149	
		Sound Radiation Pattern from Surface Waves 150	
		■ Box 7.3 Seneca Guns and Cookie Cutters 153	
	7.12	Soundboards and Surface Sound Generation 158	
		■ Box 7.4 The SST That Never Was 159	
	7.13	Thermophones—Sound without Vibration 161	
		■ Box 7.5 Sound That Won't Leave 162	
	7.14	The (Many) Other Sources of Sound 163	
		The 95 dB Sun Chips Bag 163	
8	Makin	g a Stretched String 165	
	8.1	Single Bead 167	
		Tension and Force 167	
		The Motion of the Bead 168	
	8.2	Two Beads 169	
		■ Box 8.1 Working with Loaded String 169	
		The Sinusoid Reigns Supreme 170	
	8.3	Three Beads 171	
	8.4	Combining Modes 172	
	8.5	More Beads 172	
		The Sound and Spectrum of a Pluck 173	
		Box 8.2 Spectrum for a Large Number of Beads	176
	8.6	Putting Shape and Time Together 178	
	8.7	Combining Modes 179	
	8.8	Traveling Waves on the String 180	
		Standing versus Traveling Waves 181	
		Fourier Again 181	
		Ends and Boundaries 181

хi Contents

		■ Box 8.3 Experiment with <i>Loaded String</i> 182
		Periodic or Not? 183
	8.9	The Imperfect String 184
		Weighted String 184
		Real Strings 185
	8.10	Membranes as Stretched Bead-filament Systems 185
	8.11	A Metal Chair 187
	8.12	Decomposing Complex Vibrations 187
		Mersenne and Sauveur 188
9 F	Resona	ance Rules 191
	9.1	Resonance and Constructive Interference 192
		Proximity Resonance Revisited 192
		Equivalent Viewpoints 192
		Generalizing Proximity Resonance to Any Constructive Addition 193
		■ Box 9.1 Echoes from Atoms 195
	9.2	Definition of Driven Resonance 196
		Remote versus Local Sources: Reciprocity 197
		Multiple Sources 198
		Autonomous Systems 198
		■ Box 9.2 Resonance and the Divine Harmony 199
	_	
10		ped and Driven Oscillation 202
		Friction and Work 202
	10.2	Friction and Decay 203
		Kicked Damped Oscillator 204
	10.3	Quality Factor Q 204
		Equivalent Definitions of Q 204
	10.4	Driving the Oscillator 207
		Frequency of the Driven System 209
	10.5	Resonance 209
		Phase of the Drive: Reactive versus Resistive Force 209
		Power near Resonance 211
	10.6	Impedance and Forced Oscillation 212
		Power, Impedance, and Admittance 213
		Oscillator versus Wave Resonance 214
		Driving a String 215
	10.7	Coupling of Two or More Oscillators 216
		Pure Modes 216
		Two Coupled Pendula of Different Frequency 218
	10.8	Tug-of-War: Resonance versus Damping 221
		A Physical Model 223
11	lmpu	Ise Response 225
-	11.1	Impulse and Power 226
		Five Easy Cases 226
		Power and Echo 229
		Tomer and Leno 227

xii Contents

	Caveat for Proximity Resonance 232
11.3	Sculpting a Power Spectrum 232
	Echo, Resonance, and Q 234
	The Pop of a Cork and Its Echoes 235
	Sculpting Principle for Any Signal 238
12 Impu	Ilse and Power for Complex Systems 239
12 IIIIpu 12.1	• • •
	Mode Density 239
12.2	Strength of Isolated Resonances 240
	Impulse and Power Spectrum in an Open Wedge 241
	High-Q Resonances: From Isolated to Densely Packed 245
12.5	. ,
	Power Fluctuations above the Schroeder Frequency 247
	Statistics of the Fluctuations 247
	Statistics of the Wedge Spectrum 249
12.6	Is a Piano Soundboard Resonant? 250
	Reverberant, Not Resonant 251
	Foiling Short-circuiting 253
13 Helm	holtz Resonators 255
13.1	How Helmholtz Resonators Work 255
	■ Box 13.1 Deriving the Helmholtz Mode Frequency 257
	The Ocarina: Size but Not Shape 257
13.2	Helmholtz Resonators and the Law of Similarity 258
	Higher Modes 260
	Ad Hominem Resonators 260
13.3	Phase and Power 261
	Preresonance 262
	Postresonance 262
	On Resonance 263
13.4	Resonance and Short-circuiting of Pairs of Resonators 264
13.5	Helmholtz Resonance Amplification of Sound 266
	Resonance and Reciprocity 266
13.6	Helmholtz Resonators at Work 266
	Resonators as Transducers for Sound 267
	Ported Loudspeakers 268
	■ Box 13.2 Sound Enhancement in Ancient Greece? 268
	Sound Attenuation 270
	Helmholtz Bass Traps 271
	Your Automobile as a Helmholtz Resonator 272
14 Soun	d Generation by Vortices and Turbulence 273
14.1	Vortex Streets 273
	Föppl Vortices 274
	Wagging, Shedding, and Sound Generation 274

11.2 Average Power Theorem 231

Contents xiii

Resonant Vortex Shedding 276 Entrainment 277 Aeolian Harps Big and Small 278
Reynolds Number 278
Edge Tones 279
Whistling—Ring and Slit Vortices 281
Instability and Sensitivity 281
What Is Happening in a Lip Whistle? 281
■ Box 14.1 Experiment: Second Formant Resonance 284
Sound from Turbulence 285 Jet Noise 285
Turbulence: Fricatives and Speech 286
■ Box 14.2 Experiment: Speech Turbulence 287
Other Sources of Noise 287
Noise from Tires 288
Noise nom mes 200
branes and Shells 289
Networks of Strings 289
Stretched Membranes 290
■ Box 15.1 Paul Falstad's Stretched Membrane Applets 290
Vibrations of Plates and Shells 292
Chladni and the Era of Modern Acoustics 292
■ Box 15.2 Chladni and Napoleon 295
Baffling and Acoustic Short-circuiting 296
Bowing a Metal Plate 297
Belleplates 298
Kettle Drums 299
ical Instruments 303
Instruments 305
Propagation of Sound in Pipes—Continued 305
Resonance in Tubes—Colored Echoes 306
Wall Losses 307
Box 16.1 Experiment: Resonance Frequencies and Wall Losses in a Tube 308
Frequencies of Tube Modes 309
Cylindrical Bore Tubes 309
The Conical Bore 312
The Inside-out Implosion 312
The Trumpet 315
Partials versus Resonances 315
Shaping the Trumpet's Timbre and Playing Qualities 316
The Mouthpiece Does Triple Duty 317

		Autodissonance 508
	26.2	Figuring Dissonance 510
		Helmholtz Theory of Consonance and Dissonance 512
		Trouble with 7 and 11? 515
	26.4	The Impossible Perfection of Pythagoras 516
		The Perfect Fifth as the Basis for a Musical Scale 516
		Another Path to a Musical Scale 518
		Pythagorean Just Intonation 519
	26.5	The Pythagorean Comma 520
	26.6	The Circular Musical Scale and the Circle of Fifths 522
	20.0	The Wolf Fifth 523
	26.7	The Modern Solution: Equal Temperament 524
	20.7	The Barbershop Seventh—Just versus Equal 526
	26.8	Stretched Scales and Partials—Extreme Tests of
	20.0	
	26.0	Dissonance Theory 527
	26.9	Downshifting Chopin 528
